Brain Health

The Next Concept in Human Performance Training

A Guide to Understanding the Concept, the Business Model, and the Opportunity

2025 Rev 1.3

Dedicated to my mentors who, in the early days, taught and encouraged me. Without them I would not have had the courage to stick it through.

Billie Jean King
John Donati
Charles Liu
Mary Rozina

Thank You to Our 930 Customers, Dealers, and Distributors located in 23 Countries

For helping SMARTfit to make our Brain Health Concept a reality by providing feedback during the evolution process.

Special Thanks to Our Clinical Experts who Provided the Clinical Backbone:

Ryan Glatt
Dr. Rob Winningham
Dr. Mike Studer
Dr. Beth Fisher
Dr. Charles Liu
Dr. Nik Satchidanand

A Special Thanks to Jim Manley

Our CTO who repeatedly defied the odds during his development of SMARTfit's operating system, high speed communications, gamification and product line. His work took 12 years, thousands of algorithms (many over 1,000 lines long) and thousands of hours of uncertainty.

Thank You to the SMARTfit Team

For sticking together and getting the job done. You are an amazing group of lion-hearted individuals, and I am incredibly grateful for what you have created.

Julio Martinez, Fred Ranieri, TJ Fairchild, Isabel Hernandez, Eric Pommer, Frauke Wittmer-Grant, Tom West, Diego Magdaleno, Lillie Gonzalez, Marlene Fields, Mike Esperance, and Mario Batres

Thank You to our Friends and Family of Shareholders

Who helped us bring SMARTfit into reality without investment from venture capital or investment banks. Your belief and investment are what made it possible for a tiny team to create, prove, and validate an entire technology platform that serves the rehab and Performance markets. A special thanks to those who carried the Company after Covid hit. Thank you for making it possible to keep going and get the job done without diluting the founders.

Cathi Lamberti, Founder

Brain Health
The Next Concept in Human Performance Training

"The brain is the conductor of the orchestra." – Cathi Lamberti, Founder, SMARTfit Inc.

A Guide to Understanding the Concept, the Business Model, and the Opportunity

What is Brain Health and How Could it Impact You and Your Business?

As science and technology have evolved and we have come to understand the power of the brain to enhance both physical and cognitive performance, Brain Health is quickly emerging as the next concept in human performance training. As it emerges, it is benefiting all populations, from early childhood learning to high-level sports and tactical performance, to preventing falls and slowing the progression of dementia and Parkinson's for older adults. It's a powerful and timely concept for humanity, and it also represents a major business opportunity.

Allow the brain to lead and it will elevate the health and performance of everyone. That's the fundamental premise behind Brain Health training. Everything we do in real life starts with the brain, and almost all human activity requires doing a physical and cognitive task at the same time. It's not surprising that recent science has demonstrated that training the brain and body together, not separately as we have traditionally done, transfers to improved real-life performance faster and more effectively than physical or cognitive training alone.

There is reason for optimism that the brain is finally getting the respect it is due.

The 2025 World Economic Forum at Davos, Switzerland listed Brain Health (neurological health, mental health, and cognitive performance) as one of their highest priorities in recognition of both its human and economic impact. It also mentioned the importance of physical exercise.

Industry professionals who've heard about dual-task cognitive-motor training and other brain-led solutions are asking how to include Brain Health in their programming. Key markets where we're seeing accelerated growth include physical, occupational, speech, and neuro rehabilitation, YMCAs, senior living including assisted living and memory care, longevity programs, community health & recreation centers, medical wellness, military bases, athletic programs, fitness facilities, Boys and Girls Clubs, and education.

Revolutionary new technologies are driving interest and success with unique and effective Brain Health solutions, some of which can measure baselines and track progress. SMARTfit initiated this Guide and is also actively collaborating with other suppliers featured later in the room designs.

It's important, as you learn more about Brain Health to comprehend the distinction between "bottom-up" and "top-down" cognitive processing. Bottom-up solutions challenge and train the brain and body to react faster. Top-down solutions engage users in more complex activities, uniquely challenging the executive function domain of the brain to not only react faster, but to make quicker and better decisions, improve working memory, enhance cognitive flexibility, and more.

All this happens while performing a variety of physical movements and tasks, which carry over to performance in life. Studies have revealed that it is this combination of reaction and executive function training that leads to greater transference to real-world results than simpler reaction or non-brain-led

© Copyright SMARTfit Inc. 5-28-25

strength or cardio training. We are witnessing the birth of a revolutionary health and performance concept. While long overdue, the timing is now.

What is SMARTfit and What is its Role in Anchoring a Brain Health and Performance Program?

SMARTfit has been developing technology and gamified programming for this moment for over a decade. In so doing, it has positioned itself to take a leading role in the launch of the concept by delivering some essential keys to success.

The partnerships it has created with other suppliers and organizations create additional value and choices, ensure the effective rollout of a comprehensive concept, as opposed to a single new product line. SMARTfit recognizes that it alone does not offer all of the solutions, and it is clear that everyone will benefit from the collaboration of potential competitors who instead work together to deliver the best solutions for each customer.

As you'll see later in this Guide, experts in every area of human health and performance have stated that SMARTfit is unique and that the concept of brain-led training will become the "next big thing", one that will impact all of humankind in ways that no other brain health concept has in the past. It has been said that SMARTfit will lead the way because no other solution delivers such a comprehensive range of top-down and bottom-up programming that engages the brain and body together to improve real-life performance for all ages and abilities.

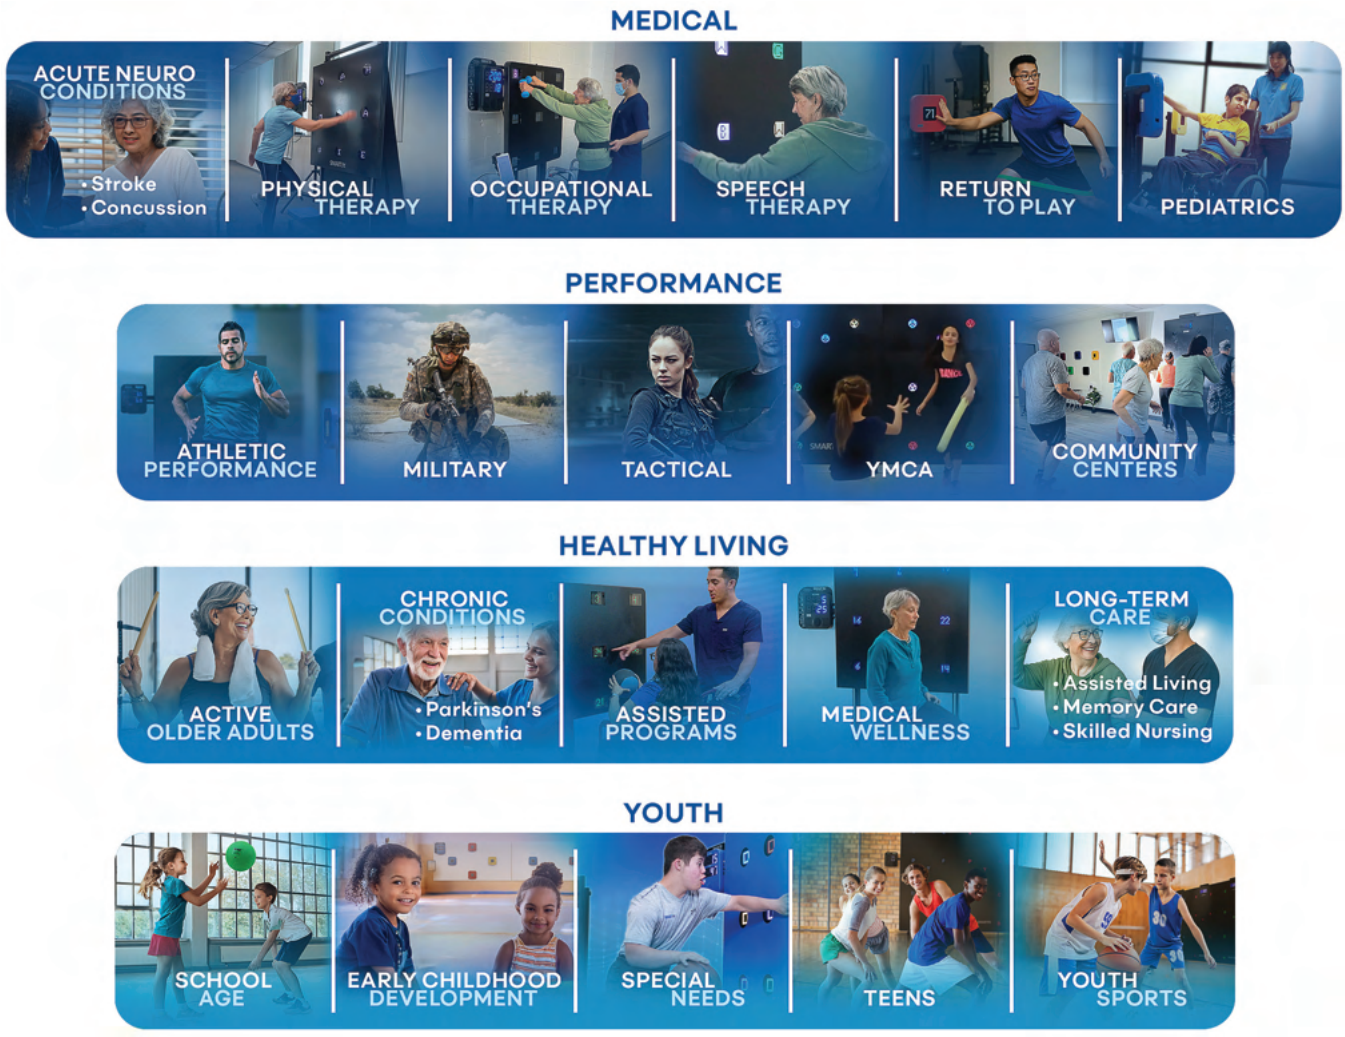

Keys to a successful Brain Health program delivered by SMARTfit include:

- SMARTfit approach to brain health involves brain-led physical peformance, since true peformance in the world requires that both brain and body work efficiently together.
- Technology Driven Cognitive-Motor Dual-Task (CMDT) programming that trains the brain and body together to deliver fast transference to real-life performance
- A comprehensive suite of six product lines that address every aspect of human performance training including early childhood development, seniors, high performance athletes, tactical warfighters, and individuals with physical and cognitive disabilities
- Gamified programming engages and motivates all participants
- Training that includes both top-down and bottom-up cognitive training
- Cognitive training that focuses on every domain of the brain: executive function, processing speed, attention and memory
- Inclusion of the full spectrum of gross motor skills training combined with cognitive training
- Inclusion of strength, cardio, balance and power combined with cognitive training
- Evidence-based pre-designed programming for every member of society regardless of age or ability, including rehab, personal training, small group training, and large group training
- Programming supported by product – Partnerships with multiple clinical experts deliver clinically valid programming to all sectors including rehab (PT, OT, Speech), assisted, independent older adults, memory care, tactical, sports, strength and conditioning and youth (sports, PE, early childhood and special needs)
- Collaborative partnerships with compatible technologies, creating a full spectrum business model for clients seeking a turnkey solution
- Business model structured to deliver a variety of options that ensure a healthy ROI for operators
- SMARTfit Academy, able to reach every trainer in the world and to keep them current with new programming and new releases

© Copyright SMARTfit Inc. 5-28-25

- Predesigned and evolving programming that meets every training need, delivered via our cloud platform, including over 3000 instructional videos
- Evidence-based data for every program, including baseline testing, progress reporting and management reporting for multi-site organizations

Customers Being Served:

The concept is already proving itself:

- Customer sites: 950 early adopters located in 24 countries
- Registered accounts: 11,382 registered trainers and clients
- Games Played: 331,449 games played

Getting Started with a Brain Health Program

SMARTfit and our Brain Health program partners recognize that deciding on the right solutions to meet your programming and budget needs, then implementing a new concept, requires much more than implementing a new product. It must include education at all levels to improve the understanding

© Copyright SMARTfit Inc. 5-28-25

of the concept and the business model. For that reason, we consult extensively with you and your team to help you:

- Fully understand the science of Brain Health and Performance and the benefits it delivers
- Understand the populations it will serve at your facility and the most appropriate solutions for those populations
- Determine which evidence-based programming meets the specific needs of participants regardless of ability
- Plan your business model and concept roll-out, including space, budget, staff and user education, marketing and ongoing refreshment of content to maintain retention
- Plan your ROI to ensure your new Brain Health program pays for itself in the form of added revenue, fast transference/results, retention/attraction of participants, and differentiation from competitors

SMARTfit works closely with our customers and partners to provide you with a variety of programming, budget, and space options for a "Brain Health" program. It also helps you introduce the concept to your clients, members, and supporters and even offers donor/grant templates for non-profits and schools.

While we are encouraged by some buyers' visions to think big and embrace a total business solution that will turn their programs into revenue generators, profit centers, and paths to differentiate themselves from their competition,we also recognize that you may need to start small and grow later. The important thing is to get started now to you don't miss what many believe is the next major concept in human performance training.

A serious financial commitment tied to these factors is benefiting the customer by producing programs that generate high levels of engagement, positive results and retention. To access options that have been tested and proven by Ryan Glatt of the Pacific Neuro Institute in Santa Monica, California, go to: https://smartfitinc.com/research-papers/ - FitBrain Program (under white papers). Also, find ideas for room designs in the next section of this document.

SMARTfit believes that this collaboration of solutions is positioned to lead with its new, evidence-based focus on training cognitive and motor performance together, while simultaneously training strength, cardio, proprioception, power and flexibility. This takes human performance training to the next level to maintain focus on training the whole person.

SMARTfit's broad product line is designed to fit any business model by providing programming that can attract and retain participants from every demographic group regardless of ability. See further in this Guide for details on specific SMARTfit solutions.

In summary, to enhance human performance and rehabilitation, SMARTfit links the brain and body through movement, creating and strengthening neural pathways so users can:

- Make quicker, smarter decisions while moving
- Execute physical and mental skills more efficiently
- Process visuals faster in order to react faster
- Train to enter the flow/zone quickly
- Improve focus, balance, coordination, and speed
- Build cognitive reserve to delay cognitive decline

Testimonials from Clinical Experts and Customers

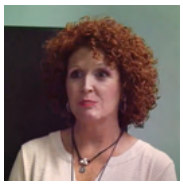

During SMARTfit's development phase, the SMARTfit team worked with various universities and industry recognized clinical experts who assisted with the development and refinement of the programming.

"SMARTfit can improve executive functioning better than physical exercise alone or cognitive alone through dual tasking. The research supports that, and, if we can improve executive functioning, that generalizes to things that have never been trained. This includes the ability to create a new memory, ability to pay attention, ability to inhibit behavior, problem solving and reasoning."
Dr. Rob Winningham, PhD. Neuroscience, Published Author, Western Oregon University

"SMARTfit is the only technology that can scale cognitive demand while concurrently executing a wide variety of physical movements and skills. Progressive increments in cognitive demand while concurrently scaling physical demands ensures leveling and prevents overwhelm or boredom. This allows the concept of demand and supply to produce optimum results for neuroplasticity. This applies to new learning, recovery and preventions." **Dr. Mike Studer, DPT, World-renowned expert in dual-tasking**

"We incorporated SMARTfit into our BRAIN Health Program to help build routines that prevent delay or reduce cognitive decline and memory loss by training the brain and body to work together more efficiently. Every participant in the BRAIN-Health Program has shown improvements in cognitive processing and motor neuro competence. SMARTfit tracks changes and improvements. This data is significant to the trainer in selecting the appropriate activities to meet the participant's needs. The SMARTfit System is also fun, further motivating participants to gain improvements in their cognitive and motor skills."
Lynn McCrory, PhD, The Bay County Council on Active Aging

"At the Pacific Institute of Neuro Technology, we have found that SMARTfit can provide a turnkey solution to deliver a variety of training activities such as strength, balance, agility, mobility, and neuromotor all in one through a single technology. At its core, SMARTfit's multimodal training incorporates scalable cognitive load through its turnkey programming for individuals at different stages of function offering both physical and cognitive engagement in different types of activities and we are seeing people have fun." **Ryan Glatt, MA, Neuroscience, Pacific Neuro Institute**

"Lifestyle recommendations, purposeful engagement, and graded challenges are critical to the successful implementation of personalized brain health programming. So thrilled to have SMARTfit technology AND the brains of Dr. Rob Winningham as innovative partners."
Sue Paul, Senior Director of Wellness and Brain Health at Asbury Methodist Village

"SMARTfit takes the focus of the player off the mechanics and moves it to the external, forcing the brain to solve two problems at the same time. This solves the big missing part in rehab because we want carryover onto the field. SMARTfit is a great tool to test if this is happening before they return to play" **Dr. Chris Powers, PhD, PT, FACSM, USC Professor, Director, Biokinesiology Program, Co-Director, Biomechanics Research Lab - Movement Performance Institute**

"Everything in Parkinson's research points to the need for combining cognitive challenges with physical activities – I cannot think of a better way to do that than with SMARTfit."
Dr. Beth Fisher, PhD, PT, FAPTA, Professor of Clinical Physical Therapy, USC

© Copyright SMARTfit Inc. 5-28-25

“SMARTfit is an incredibly engineered machine that can basically mimic any kind of neurocognitive test. It also brings in the capacity to do whole body movements in exercise in conjunction with it. You can look at dual task performance how much this alters cognitive ability while moving so it has real potential an assessment tool for alterations for neurocognitive function. It has enormous potential as a treatment or rehabilitation device in which you can combine exercise, attention, cognitive testing and have fun while doing it which will work so much better than other alternatives.” **Martin Teicher, MD, PhD, Associate Professor of Psychiatry, Harvard Medical School**

“Rehabilitating the body during movement is one thing, but with SMARTfit we can integrate cognitive, motor, and functional movements to stimulate neuroplasticity. SMARTfit has created interactive games that bring together cognitive dual tasking with functional balance and movement.” **Jane Mead, PT. DPT, MS - FYZICAL Therapy and Balance Centers - Glendale, CA**

“Using the various activities, our kids are able to work on a variety of skills. Their reaction times and accuracy to hit the targets greatly improve over consecutive trials, demonstrating motor learning and quickened moto responses. We are able to work on static and dynamic postural responses, balance, and proximal stability crucial for participation in playground games and Physical Education classes.” **Kimberly Koretoff, OTD, OTR/L, SWC, CAS**

“SMARTfit is a smart choice! My patients love it and some refuse to leave without working out on it. It is a great tool as it advances otherwise basic care plans and makes it more engaging and motivating for patients. I use it for patients from all age groups. My Youngest patient is 7 and my oldest is 70. It is so versatile and maximizes my ability to treat in the short time.” **Elizabeth McQueary, OT, Banner Sports Medicine and Concussion Center - Phoenix, AZ**

“I see SMARTfit as a way for elite athletes to break through performance plateaus and develop the vital underlying reaction and motor skills for sports. More importantly, it helps to develop efficient on-the-spot mental processing which is great for sports as well as all high-pressure professions such as business, military and policing. This platform is limitless.” **Lawrence Jackson, Former NFL Defensive End**

“It’s not often that I’m excited about products but I’m excited about SMARTfit. I spent the better part of my career as a trainer and have been doing dual-task training manually with clients for years. To find a system that provides the fun, is engaging, gamified, and competitive, is just fantastic.” **Kathy Fisher, CEO, West Morris Area YMCA**

“Twelve weeks ago, my friends dragged me to the YMCA. I did not want to carry that six-pound ball all over the place or stand on one foot, looking like a fool. But halfway through the first class on SMARTfit, I was too busy laughing, sweating, and playing with my friends to think about any of that. And now, 12 weeks later, I can stand on one foot without being afraid of falling, I can walk farther than I could five years ago, and I have a new group of friends who laugh with me and support me.”

YMCA MCI Study Participant, University of Buffalo

Examples of Brain Health and Performance Solutions to Meet the Space, Programming, and Budget Needs of Every Facility

These room-design concepts, based on a 20’ x 40’ room (racquetball court conversion or other available space) utilize SMARTfit along with other brain health solutions. These can be adapted to any available space to meet the objectives of each customer.

Athletic Training: High-performance Cognitive and Physical Skill Building

Athletic and Tactical Performance Training for Up to 30 Participants

Products: SMARTfit ProTrainer 4, SMARTfit High Impact Mini, SMARTfit Strike Pods, Matrix Rack System, Reax Treadmill, Reax Lift, Reax Board, ViPR Pro

Chronic Diseases: Slow the onset of Parkinson’s, MCI, and Dementia

Personal, Small Group Circuit Training For Wellness Classes Up to 10 Participants (based on a 20’x20’ space)

Products:

Option 1: SMARTfit ProTrainer 2, SMARTfit High Impact Mini On-Wall, SMARTfit Strike Pods, DividatSenso **Option 2:** SMARTfit High Impact Mini On-Wall and Dividat Senso

SMARTfit CMDT (Cognitive-Motor Dual Task) Training Designed to Improve Executive Function Abilities

"SMARTfit can improve executive functioning better than physical exercise alone or cognitive alone through dual tasking. The research supports the idea that, and if we can improve executive functioning, generalizes to things that have never been trained including activities of daily living that can maximize independence and quality of life. This includes the ability to create a new memory, ability to pay attention, ability to inhibit behavior, problem solving and reasoning."

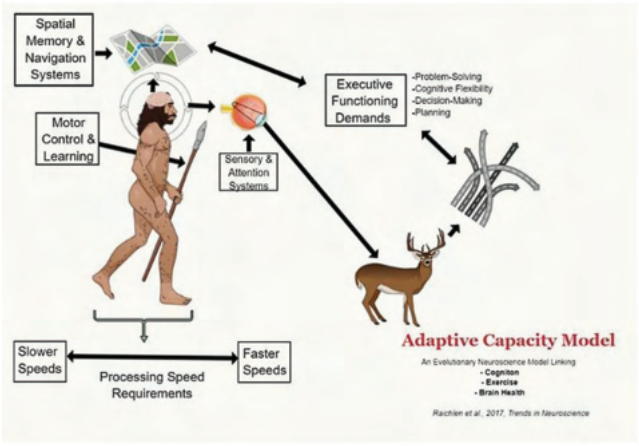

Dr. Rob Winningham, Ph.D. Neuroscience, Published Author, Western Oregon University.

SMARTfit Uses the Science-Based Adaptive Capacity Model to Deliver Training

As hunter gatherers, humans had to use their brains and bodies together in order to survive and advance. Thus, humans evolved by developing the ability to cognitively problem solve, plan, and make decisions in order to finally act, using motor skills to achieve the goal. This interaction between brain and body produced the human evolution of today and is deeply embedded in our DNA.

© Copyright SMARTfit Inc. 5-28-25

Since the start of the industrial revolution and more recently computerization, we have shifted to largely inactive, desk-bound, and seated activity. As a result, humans are increasingly sedentary, resulting in a myriad of physical and cognitive conditions which drive up health costs, damage quality of life and limit our abilities in all walks of life.

Up until now, the fitness, wellness and performance industries have yet to fully embrace this cognitive-motor dual task (CMDT) function as a critical component of the solutions they provide. However, the physical therapy industry has been using this technique for the past thirty years, producing extensive evidence that training the brain and body together (dual tasking) provides faster results than training either one alone. Recent studies specific to SMARTfit have confirmed this.

What is SMARTfit Used For?

1. **Performance:** Improve cognitive-motor, dual-task functional performance for all ages and abilities, including, but not limited to, athletes, military tactical personnel, older adults, K-12 physical education, early childhood education, mental health clients, and those with special needs including those on the autism spectrum.
2. **Repair:** Orthopedic & Chronic/Acute Neuro-rehab, Concussion, Vestibular Health
3. **Mitigation:** Falls in Older Adults, Mild Cognitive Impairment (MCI), and Dementia
4. **Delaying:** Loss of Activities of Daily Living (ADL's), onset of Parkinson's symptoms, MCI, Dementia

© Copyright SMARTfit Inc. 5-28-25

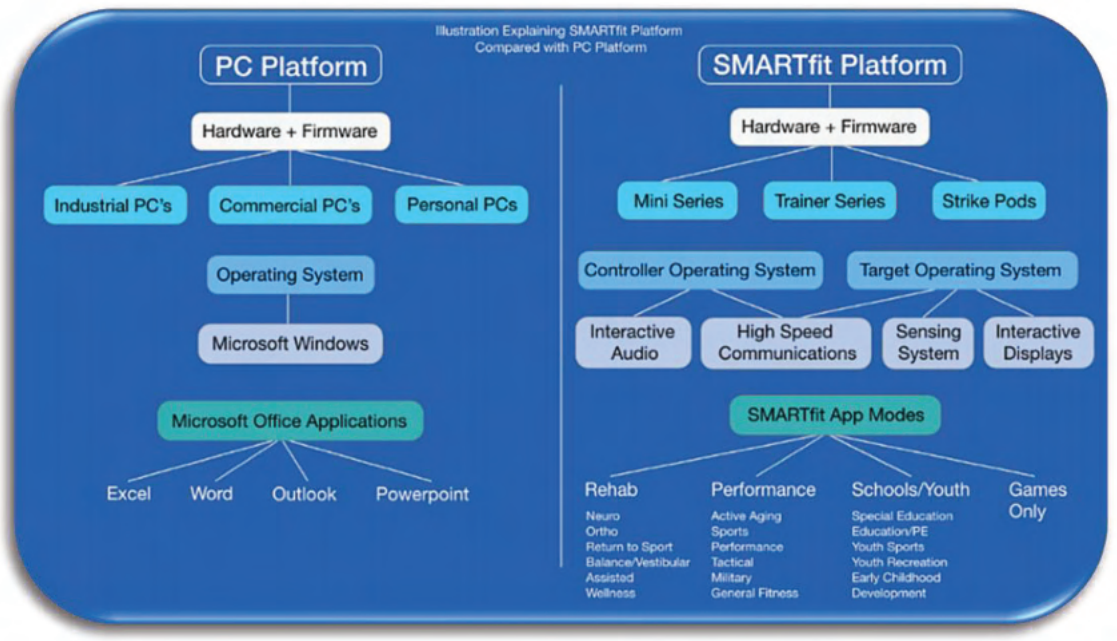

SMARTfit's Proprietary Operating System

Provides the Capacity to Deliver a Wide Variety of Applications on a Wide Range of Equipment

SMARTfit's Technology includes its own proprietary operating system that drives multiple product lines, each designed to serve different application needs. As the illustration explains, the systems deliver content from an iOS/Android tablet that is connected to the Cloud. Programming is delivered via 20 game suites and 3,000 pre-designed activities that have been developed to serve every demographic group.

How SMARTfit Works

A high-speed controller receives instructions from the SMARTfit Android/iOS App user interface, distributing gamified content to and from any number of computerized targets located in front of and around the individual. Each target features a computerized display providing stimulus and an adjustable touch sensor capturing responses, which trains the participant to manage their power appropriately. The purpose is to stimulate each participant's physical and cognitive interaction in a way that simulates real life. Progressive leveling enables participants of any age or ability to enhance their cognitive and physical abilities at a pace appropriate to themselves.

© Copyright SMARTfit Inc. 5-28-25

SMARTfit System Options

1. **SMARTfit Mini** – This system is available in 5 hardware configurations, each with three controller software license options (rehab, performance, and games only). It has the option to add 1-15 wireless SMARTfit Strike Pods to create a 360-degree training experience. The Mini is the only system used for implementation of the Cognitive and Dual Task Cost Tests.

2. **SMARTfit Trainer** – This system is available in two configurations, each with two controller software license options (performance and games only). It has the option of adding 1- 15 SMARTfit Strike Targets to create a 360-degree training experience. It is available as an on-wall installation, or free-standing on a frame. The Trainer is not upgradable to the MultiTrainer or ProTrainer because it does not have an additional scoreboard.

3. **SMARTfit MultiTrainer Gen 2** – This system is available with the Education Controller Software License. It is offered with 1-4 stations to accommodate large groups of between 1 and 10 participants per station. It is only available as an on-wall installation for gyms and multi-purpose training rooms and is blue in color. Scores are tracked on each station, setting up competition with an additional scoreboard that tracks the total score of all stations. Software now offers an extended suite of games and pre-designed activities and programs including data tracking of individuals in a large group setting.

4. **SMARTfit ProTrainer Gen 2** – This system differs from the MultiTrainer in that the panels/ stations are joined together. The Performance Controller Software License (required) operates in two settings: MultiTrainer setting scores are tracked on each station setting up competition. In Performance setting all targets on all panels join together, simulating a backboard or goal to track a single score. It is ideal for sports performance, individual or team training. It is offered with 1-4 stations to accommodate large groups or teams. It is available as an on-frame or on-wall installation for gyms and multi-purpose training rooms and is black in color. Software now offers an extended suite of games and pre-designed activities and programs including data tracking of individuals in a large group setting.

5. **SMARTfit Wireless Strike Pods Gen 2** – Now available in Gen 2 wireless configurations with intelligent rapid charging and additional safety features which prevent over-charging of batteries. Power banks are no longer used, making it easy to transport replacement batteries by air. These systems are available in the following configurations: 3, 5, 7, and 9 strike pods, with the ability to add more; maximum 15. In addition, wireless systems can be added to any of the SMARTfit Mini or Trainer models. The SP Controller Software License is included.

6. **SMARTfit Wired Strike Pods** – Now available in wired configurations, the following are available: 3, 5, 7, 9 and 15 strike pods. Color choices are recommended to support various programming options with team play. The spacing between Strike Pods can vary; be sure to request wire length at time of purchase. The SP Controller Software License is included.

Which System is Right for your Clients?

1. **Rehab:** SMARTfit High Impact or Low Impact Mini with or without SMARTfit Strike Pods. This model offers a higher concentration of targets with Strike Pods adding a 360-degree playing area. The SMARTfit portable Neuro Kit comes with everything needed to deliver neuro-rehab at multiple locations.

2. **Fitness and Performance Training:** SMARTfit ProTrainer is our flagship high performance sports and fitness team training solution. SMARTfit MultiTrainer is a great solution for school PE and community centers offering after-school training. SMARTfit High Impact Mini: for functional fitness for all ages. SMARTfit Trainer is best for ball sports and youth programs. Add Strike Pods for a 360-degree playing environment. SMARTfit Low Impact Mini or Wired Strike Pods: for early childhood education and special needs.

3. **Portable/Flexible 360-degree training for Rehab or Performance, indoors and outdoors:** SMARTfit wireless Strike Pods offer programming in all modes with the benefit of increasing the playing area up to 100 feet with up to 15 Strike Pods.

4. **Small Group Training:** Using the SMARTfit Mini or Single, for small groups (3-5 per system) in round robin programming adds a fun, social element, or to use SMARTfit as the "cognitive and dual task" station of a circuit training program. SMARTfit Strike Pods can also be placed over a large area.

5. **Large Group Training:** For large groups of athletes, active agers or youth, the MultiTrainer or ProTrainer options are best, offering between 2 and 4 stations for team training. Choose the ProTrainer for team sports training or large fitness classes.

© Copyright SMARTfit Inc. 5-28-25

SMARTfit Offers Extensive Programming

Performance Applications

1. High Performance Cognitive Training for Athletes.
2. Cognitive Motor Dual Task Strength and Conditioning Training for Tactical Performance.
3. Active Aging programs in community centers, fitness centers and retirement communities.
4. Youth Programs: after school, sports, physical education.
5. Early Childhood Development Programs.

Rehab Applications

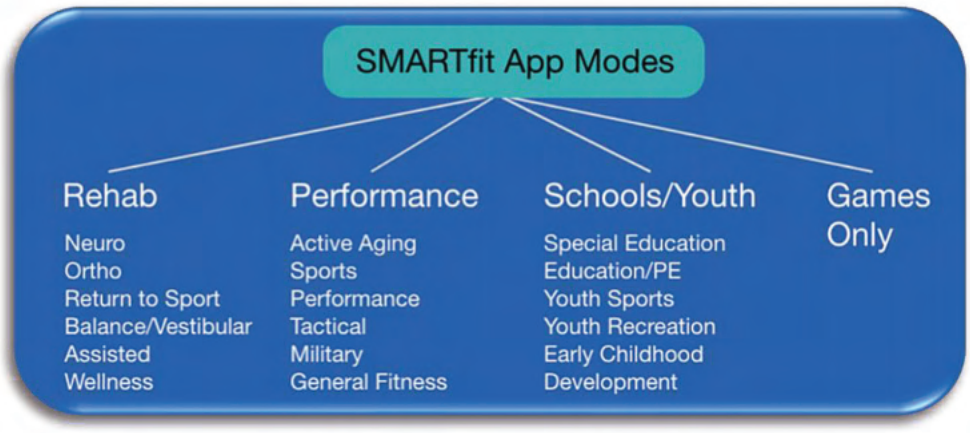

1. Assisted individuals who use a wheelchair, walker, or cane for mobility. Programming focuses on improving core strength, balance, mobility, and cognitive function, especially when doing a physical task.
2. Independent Older adults focusing on delaying the onset of cognitive and physical decline.
3. Acute Neuro-Rehab for ABI/TBI, including concussion, stroke, Parkinson's, and other chronic neurological conditions.
4. Chronic Neuro-Rehab for slowing or preventing Parkinson's, MS, Vestibular challenges, Mild Cognitive Impairment, and Dementia.
5. Orthopedic Rehab for later stage upper and lower extremity rehab and return-to-play sports.

The neuro-dynamics of dual task is not the same as cognitive stimulation alone. Therefore, dual tasks are superior training for functional contexts (locomotion coupled with executive functions) when compared to cognitive training, for the sheer reasons of task specificity and brain-location specificity.

1. Pilot Studies Using SMARTfit on specific populations:
    a. Parkinson's – University of Southern California, published in November 2021
    b. MCI - University of Buffalo – published in January 2023
    c. Brain Health – Miami University (Ohio) – published in 2024

Predesigned Programming

SMARTfit offers predesigned programming modules and data tracking for personal, small group and large group training.

SMARTfit User Interface App Components

All SMARTfit Systems are now activated and managed via the SMARTfit User Interface App available on the iOS or Android platforms and can provide programming updates via internet. This is a key feature that ensures that all customers will always be able to access the latest software and programming updates from anywhere in the world.

For learning and demonstration purposes, all SMARTfit Sales Representatives should download the SMARTfit app from Apple or Android app stores. Search for “SMARTfit, Seize the Now”.

Sign in with Username: demo@smartfitinc.com and Password: SMARTfit20N!

Below are screenshots of the five main tabs. “Test” is available only with the RA license:

The following updates are regularly delivered:

- New Games
- New Activities
- New Programs for every demographic group
- New Quick Start programs to help customers get started

SMARTfit’s internet-delivered programming updates take place via the iOS/Android SMARTfit app user interface. All programs, client data, and progress tracking is stored on the HIPAA compliant cloud, thus ensuring data is secure and that the systems will never be outdated.

1. **Four Modes:** SMARTfit’s user interface comes in four modes which enables payment only for what is needed: Rehab, Fitness, Education, and Games Only (explained in more detail later).

2. **Games:** Our games address all areas of the brain and form the foundation of the SMARTfit system. When paired with a physical task they become activities, programs and tests. There are 17 game categories, each focusing on integrating cognitive, neuro and physical abilities. Cognitive focus is placed on improving processing speed, attention, executive function, memory, and language. Physical training focuses on strength, balance, gait, and activities of daily living.

© Copyright SMARTfit Inc. 5-28-25

SMARTfit game categories provide scalable training designed to address multiple brain domains while igniting improvement in the brain and body connection.

User settings within each game allow trainers to precisely control how their clients are challenged. Each folder includes multiple variations of games, and each game can be tailored to match and challenge the physical and cognitive capability of any participant. Challenges can be gradually increased by altering the length of the games as well as by making incremental changes to the settings.

Variations include:

- options for how many and which targets will be used
- the sequence
- the level of sensitivity
- the images displayed
- the physical activity while interacting with the targets

In this way, skill building takes place in a controlled and measured way to ensure the best balance of challenge and safety and also match the level of participants' ability. Note that the systems communications can execute games at a speed faster than the fastest athlete while tracking performance data in real time.

© Copyright SMARTfit Inc. 5-28-25

SMARTfit Gamification Explained

SMARTfit's power lies in its gamified delivery of programming that will continuously demand faster and more accurate results from its participants without incurring overwhelm or boredom. This form of gamified practice, delivering score under time pressure, triggers engagement, incentive and high repetitions to create the practice required to develop and strengthen neural pathways. It is this intensified motivation to improve game results that drives the demand on the brain and motor system to develop new and more efficient neural pathways.

The more individuals practice at a higher level than their comfort zone, the faster the entire neuro system will respond to meet the increasing demand. Continued practice at ever-increasing levels of demand is how accelerated results are achieved. Of significance, the SMARTfit problem-solving games serve to achieve the dual task engagement, which is the key to accelerating cognitive-motor improvement. This is how champions are developed in record time.

Data provides evidence of a person's present level of function and later proof of progress. SMARTfit's tests are quick and easy to administer, with progress reporting designed to reveal the effectiveness of subsequent training as it applies to sports performance, activities of daily living, decreased fall risk, and other performance indicators while also enhancing self-confidence and engagement.

Game categories offered within the SMARTfit user interface app provide scalable training designed to address multiple brain domains while igniting improved performance of the brain and body connection.

User settings within each game allow trainers to precisely control how their clients are challenged and trained. Each folder includes multiple variations of games, and each game can be tailored to match and challenge the physical and cognitive capability of participants. Challenges can be gradually increased by altering the length of the games as well making incremental changes to the settings. Variations include:

- options on how many and which targets will be used
- the sequence
- the level of sensitivity
- the images that will be displayed
- the physical activity that will be done while interacting with the targets

In this way, skill building takes place in a controlled and measured way, ensuring the best balance of challenge and safety to match the level of ability of participants.

Game Categories:

1. **Rally Wall:** Skill – Ball Play – Ball Strike Within the Lit Region 3
2. **Knock the Lights Out:** Option of Race or Timed – Brain Domain Focus – Processing Speed
3. **Track:** Strike Sequential Lit Target – Brain Domain Focus – Processing Speed/Executive Function
4. **Track Left, Right, Both:** Sequential Lit Target/Decision Making – Brain Domain Focus – Processing Speed/Executive Function
5. **Chase:** Sequential Lit Target/Preset Time Interval – Brain Domain Focus – Processing Speed/Executive Function
6. **Go No Go:** Sequential Lit Target/Preset Time Interval (Interval/Avoid) – Brain Domain Focus – Processing Speed/Executive Function
7. **Seek:** Multiple Choice – Brain Domain Focus – Attention/Executive Function
8. **Metronome:** Synchronize Taps with Tone – Brain Domain Focus – Memory/Attention

© Copyright SMARTfit Inc. 5-28-25

9. **Pattern Recognition:** Tap Matching Targets – Brain Domain Focus – Memory/Attention
10. **Stroop:** Match Congruent/Incongruent Targets – Brain Domain Focus – Executive Function/Attention
11. **Flanker:** Tap Targets Prompted by Middle Arrow on Center Target – Brain Domain Focus – Executive Function/Attention
12. **Corsi Block:** Tap Targets in Sequence with Increasing Complexity – Brain Domain Focus – Memory/Executive Function
13. **Trail Making:** Multiple Choice/Completion Time – Brain Domain Focus – Attention/Executive Function
14. **Digit Span:** Tap Targets in Sequence with Increasing Complexity – Brain Domain Focus – Memory/Executive Function
15. **Serial 7's:** Multiple Choice Descending by 7's (Completion Time) – Brain Domain Focus – Memory/Executive Function
16. **Memory Pairs:** Match Identical Targets Until All are Found – Brain Domain Focus – Memory/Executive Function
17. **Pairing:** Match Identical Targets/Refresh Each Time – Brain Domain Focus – Memory/Executive Function
18. **Memory Sequence:** Tap Each Sequential Target – Race (first target sets start) – Brain Domain Focus – Memory/Executive Function
19. **Equations:** Multiple Choice with Problem Solving – Brain Domain Focus – Executive Function/Attention
20. **Spelling:** Tap Correct Order of Letters – Brain Domain Focus – Executive Function/Attention
21. **Time Clock and Timer**: Provides a valuable tool when setting and monitoring non-SMARTfit group activities

Activities:

An activity is a game tied to a specific physical activity. Numerous client-specific folders are provided, each offering an extensive variety of predesigned dual task (cognitive and motor) activities. With over 3,000 in total, each activity is supported with a how-to video designed to demonstrate progressive increments to address each client's ability.

Programs:

A program consists of specifically chosen activities deployed in a sequence. Programs include desired repetitions and length of time. Ready-to-go turnkey dual task programs allow for quick implementation of scalable workouts that also deliver progress reporting. These programs are built from pre-designed activities folders.

Tests:

SMARTfit offers two kinds of tests available only in Rehab Mode on the SMARTfit Mini.

a. Cognitive Tests: a series of gold standard cognitive tests done using the entire body rather than the traditional use of a computer or pen and paper. These include Trail Making A, Trail Making A and B, Symbol Comparison, Digit Span Forward, Digit Span Backwards, Corsi Block, Flanker, Serial 7's, and Stroop.

b. Dual Task Cost Test: These are the only standardized dual task cost tests for independent and assisted older adults being deployed on the cloud. They provide evidence of progress and transference of all interventions provided by the trainer/therapist from an initial baseline test.

© Copyright SMARTfit Inc. 5-28-25

They capture the loss of performance when a person completes a cognitive and motor task together as opposed to doing either of them separately. This “dual task cost” report provides a means to track improvement in cognitive and/or physical function over time. Since activities of daily living (ADLs) are all essentially dual task, this test, based on over 30 years of research, offers a powerful yet simple way of tracking transference and the efficacy of functional skills in clients.

Build Your Own:

The build tab offers some outstanding features including the ability to:

- create customized reports from data collected from any pre-designed or self-created program
- design specific target sequences with any game
- create specific levels within a game
- insert a new list into the spelling game

Data:

SMARTfit captures data from its programs and tests which can be delivered on screen as a PDF report, or electronically via Excel or API.

Multi-Site Data Management: Performance tracking and Reporting by Facility, Therapist/Trainer and Patient

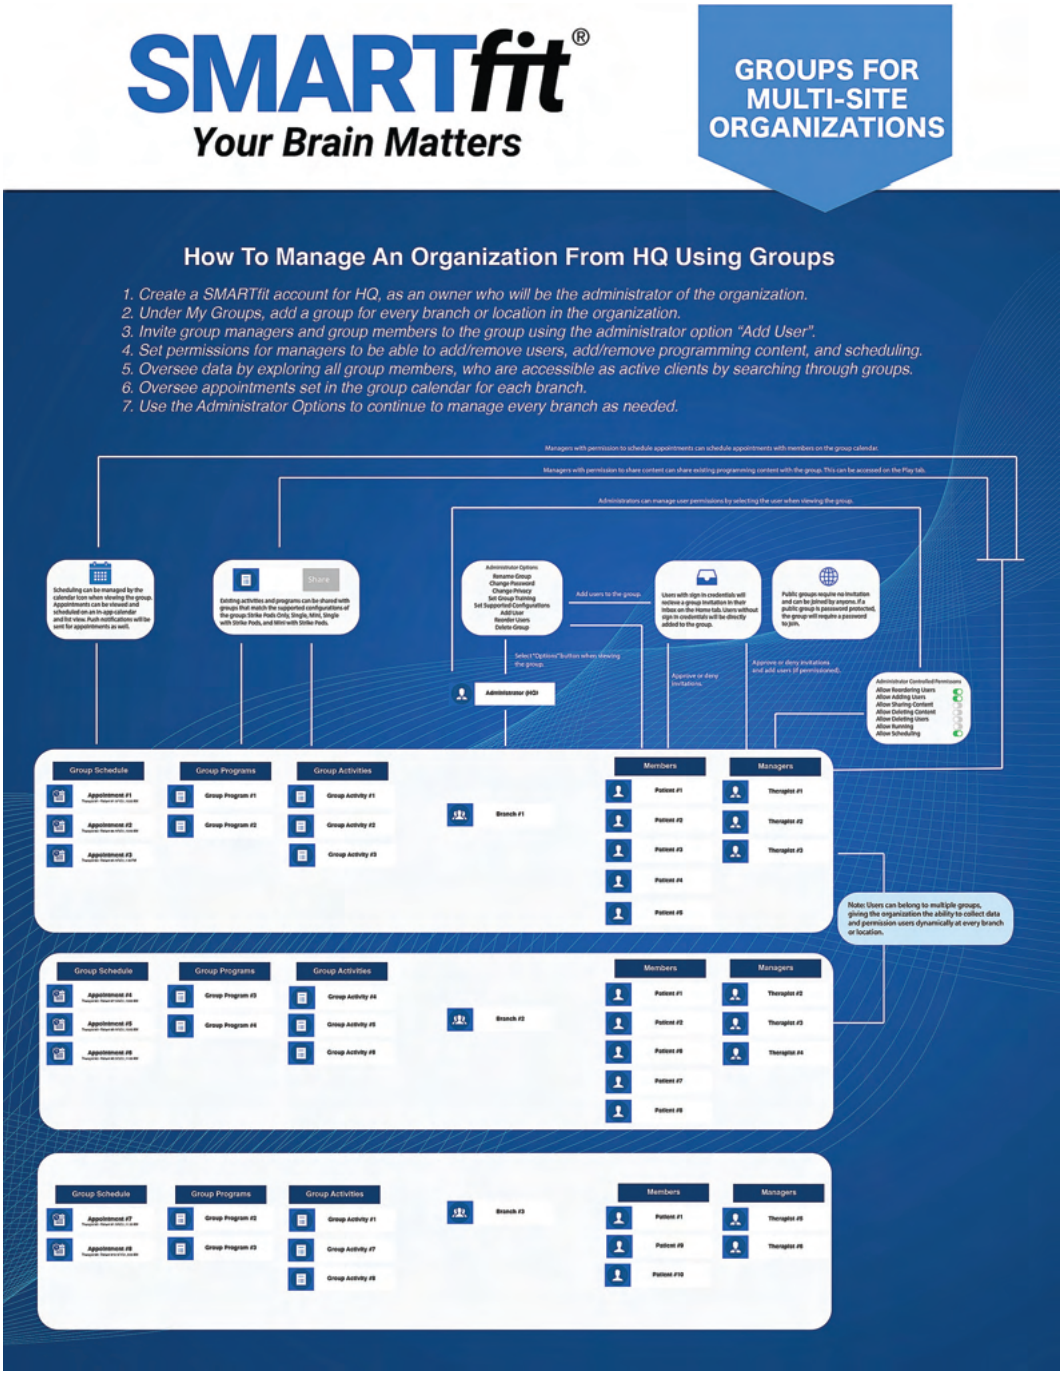

Standardized programming, testing and data tracking for multi-site organizations provides HQ with a detailed dashboard showing the progress of each client or program at each location. This offers a powerful marketing tool to increase the organization’s competitive advantage. SMARTfit now provides evidence-based technology that automatically tracks data from rehab or wellness programs across the entire organization – providing the ability to:

- Demonstrate efficacy at HQ
- Increase staff accountability
- Motivate participants by sharing assessment and training results with them, and market the overall results to attract more participants and differentiate your business!

© Copyright SMARTfit Inc. 5-28-25

SMARTfit does all of the above and more, tracking key brain and body performance data by participant, trainer/therapist, and location. Clients, residents, and members enjoy the experience. The gamified, dual-task programming not only becomes faster with more effective results but also is engaging and challenging for all ages and ability levels.

SMALL Group and Large Group Training Programs

1. Group Training for the SMARTfit Mini, Single, and Strike Pods

SMARTfit's group training feature makes it easy for trainers to manage multiple clients at once while tracking each person's progress in real time. The addition of an on-wall airplay TV monitor above the SMARTfit controller tracks each person's position in the program by displaying the order of players and the activities yet to be completed. This ensures that everyone stays engaged, knows what to do next, views a video of each sequential task, and tracks scores.

2. Quick Groups for Group Training Feature Makes it Easy to get Started on All Systems Including the SMARTfit ProTrainer, and MultiTrainer

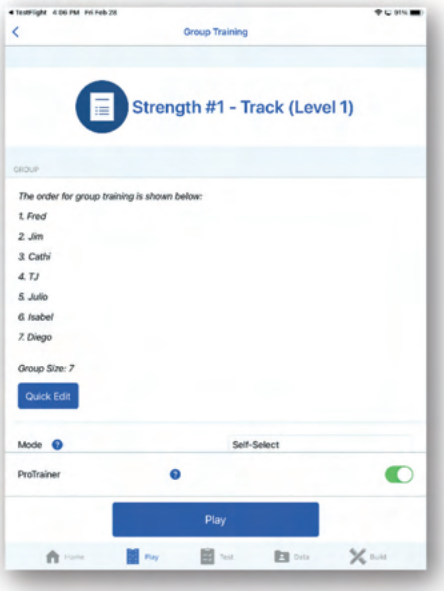

A powerful time-saver for trainers, teachers, and coaches, Quick Groups allows them to set up group training sessions without the need to create individual profiles for each participant. This feature makes it easier than ever to organize sessions efficiently and focus on delivering an engaging training experience.

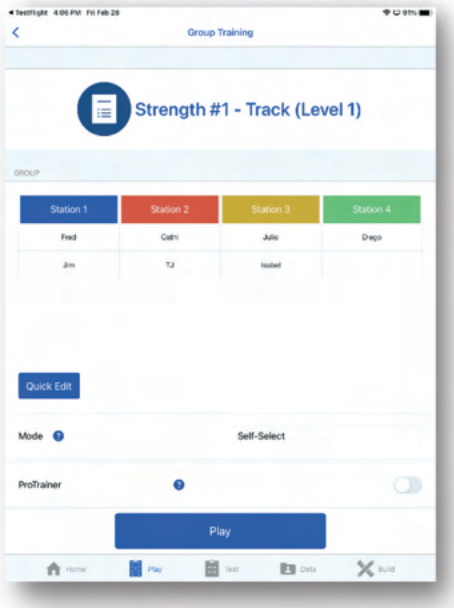

Additional features are available in Group Training that offer various options for setting up group training. These include:

© Copyright SMARTfit Inc. 5-28-25

3. Group Training for the ProTrainer and MultiTrainer for Large Groups

The SMARTfit ProTrainer and MultiTrainer now support group training in multi-station mode, making it easier to engage large groups in a structured format. The video shows how easy it is to get started with predesigned group training with data tracking of each individual. Watch the video here: https://www.youtube.com/watch?v=8wTI2GtugFc

Note: Remember to get a set of SMARTfit wrist bands to assist players in tracking their place in play. Load your group into a multi-station group training format:

Your active group will be automatically loaded across your stations evenly.

You can drag and drop users into different stations if you would like to make any changes.

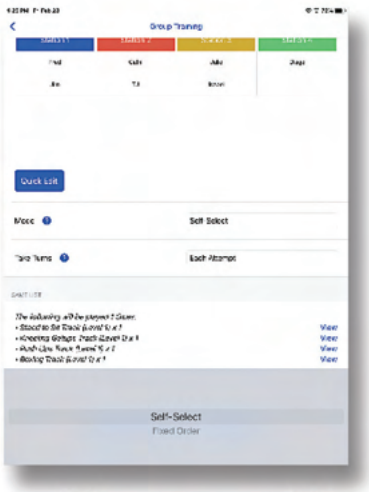

You can also swipe left on a member to remove them from their station if they are not present for this group training session.

These functions provide a flexible setup.

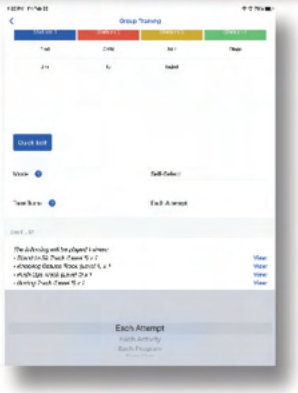

© Copyright SMARTfit Inc. 5-28-25

Choose Self-Select Mode or Fixed Order Mode to determine the sequence of participation.
Self-select will allow you to choose which member with an available turn is up next at each station.
Fixed order will automatically select the next member to be up at each station.

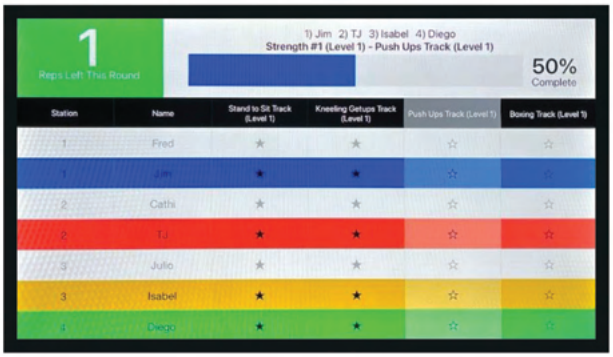

Alternate users by each attempt, activity, or program for dynamic training sessions.

Stations are color-coded to match the new SMARTfit wristbands (Blue, Red, Yellow, and Green), streamlining user identification and organization.

AirPlay support allows you to cast the Group Training Tracker to a second screen when using iOS for real-time progress tracking.

© Copyright SMARTfit Inc. 5-28-25

Access Options: Cloud or Local

SMARTfit offers extensive resources via its Cloud service, including the ability to have everyone's progress stored on the Cloud for any device. This delivers programming and access to regular software updates. Because not everyone can enjoy the benefits of the Cloud, SMARTfit also offers Local Mode in which the Android/iOS tablet used to operate the system is set to local mode and data is stored on the tablet itself. When an update is needed, the tablet is taken to a location where the update can be downloaded and can be implemented upon return to the system.

SMARTfit License Options Explained

- SMARTfit offers a variety of licenses designed to meet your programming and budgetary needs. Ask your SMARTfit consultant to assist in determining which license is best for you.
- All SMARTfit systems except the SMARTfit Strike Pods require a choice of license for one or more years. All licenses include periodic program updates. To receive a lifetime license, purchase 5 years. Strike Pod systems automatically include a lifetime license.
- SMARTfit owners may opt out of the license when it expires. Opting out allows owners continued access to basic games and data already collected while losing access to all program updates except bug fixes. Customers may also switch to another license.
- Add wireless SMARTfit Strike Pod targets to any Individual SMARTfit panel system (no additional license required) to create a 360-degree training experience.

License G: Games Only

Applications: Sports performance, rehab, fitness, wellness, tactical, physical education, special education, adaptive programs, brain/body health, sensory integration, and home facilities and programs

Populations: All ages and abilities

- 20+ folders of games focusing on a suite of games that address specific domains of the brain. New game suites are continually added. Examples: Track sequential targets; Seek (multiple choice), Go-No-Go (impulse control), Memory (14 short-term memory games), Cognitive training (Trail Making A/B, Stroop, Digit Span, Corsi Block, Flanker, Serial 7's, Pattern Recognition, etc.), Metronome, Equations, Spelling, and more.
- Game data tracking available
- Note that all client data activities and program tracking, tests, reporting, and data exporting will require the purchase of either Model R or Model P controller

License P: Performance & Fitness

Applications: Sports performance, rehab, fitness, wellness, tactical, physical education, special education, adaptive programs, brain/body health, sensory integration, and home facilities and programs

Populations: All ages and abilities

Includes: the following, plus everything in the Games Only License:

- 1,000+ ready-to-use video supported activities and programs arranged in folders sorted by demographic include personal training, active aging, tactical training, sports skills training, and youth training
- Client Management: Managing and monitoring unlimited numbers of clients
- Easy customizable programming and reporting/exporting option
- Multi-site Monitoring: Deployment of programming across multiple sites monitors data of all clients at all sites. Provides validation of success of all programs, not only SMARTfit.

© Copyright SMARTfit Inc. 5-28-25

- Group Training: Automatic data tracking using QR wristbands
- SMARTfit's Leaderboards and Challenges are designed to drive engagement and competitiveness with self and others, with leaderboards tracking the high scores in a set of brain-body activities that are applicable to each demographic group
- SMARTfit tournaments are offered to enliven competition and boost engagement. They can operate on the Cloud or privately at a single member site or across multiple sites if the multi-site subscription is used

License R: Rehab, Wellness, and Performance

Applications: Rehab – Orthopedic, Neuro, Motor, Pediatrics
Older Adults – Active Aging, Senior Living, Assisted Living, Memory Care, Skilled Nursing

Populations: Rehab – Stroke, ABI, TBI, Concussion, Workers' Compensation, Return-to-Play Sports, Return-to-Tactical-Duty
Older Adults – Active Aging, Assisted, MCI, Dementia, Alzheimer's, Parkinson's

Includes the following plus everything in the Games Only License

- Client Management: managing and monitoring programming and performance data for an unlimited number of clients
- 2,000+ pre-designed rehab activities and programs arranged in 6 folders of turnkey programming with how-to videos ready to deploy. Includes: orthopedic, neuro, brain health for independent adults, brain health for assisted adults, brain health based on MMSE scores
- 1,000+ ready-to-use video supported performance activities and programs arranged in folders sorted by demographic include personal training, active aging, tactical training, sports skills training, youth training
- Easy customizable programming and reporting/exporting option
- The ability to create and build activities include selections and sequences of activated targets and content to suit specific training needs
- Multi-site Monitoring: Deployment of programming across multiple sites monitors data of all clients at all sites. Provides validation of success of all programs, not only SMARTfit.
- Group Training: Automatic data tracking using QR wristbands
- Leaderboards and Challenges: designed to drive engagement and competitiveness with self and others, SMARTfit's leaderboards track the high scores in a set of brain-body activities that are applicable to each demographic group/gender

License RA: Rehab and Wellness with Assessments

Available Only with any SMARTfit Mini Model

Applications: Rehab – Orthopedic, Neuro, Motor, Pediatrics
Older Adults – Active Aging, Senior Living, Assisted Living, Memory Care, Skilled Nursing

© Copyright SMARTfit Inc. 5-28-25

Populations: Rehab – Stroke, ABI, TBI, Concussion, Workers' Compensation, Return-to-Play Sports, Return-to-Tactical-Duty
Older Adults – Active Aging, Assisted, MCI, Dementia, Alzheimer's, Parkinson's

Includes the following plus everything in the Rehab, Performance, and Fitness Licenses:

- SMARTfit Dual Task Cost, Physical Screening, and Cognitive Assessments
- Eight Neuropsychological Tests combined with a motor activity including: Trail Making A & B, Digit Span Forward & Backwards, Corsi Block, Symbol Comparison A & B, Stroop A & B, Serial 7s
- Baseline and progress monitoring Dual Task Cost test measures and tracks transfer of all interventions to activities of daily living (ADL's), developed by renowned experts Drs. Mike Studer and Rob Winningham. Addresses Lower Extremity x 9; Balance x 12; Gait x 12. For Assisted level and independent level older adults

License SP - Strike Pod Systems - Lifetime License Included

Applications: Sports performance, rehab, fitness, wellness, tactical, physical education, special education, adaptive programs, brain/body health, sensory integration, and home facilities and programs

Populations: All ages and abilities

Includes the following:

- 20 folders of gamified categories with variable difficulties and challenges including track, seek (multiple choice), metronome, Go/No-Go, Memory, Spelling, Equations, and more
- 107 activities with how-to videos covering transfers, reaching, power, fine motor/dexterity, stepping, and balance in seated, assisted, and standing positions
- Turnkey Programming for all ages and abilities – sports performance, tactical performance, older adults, PE, and special education
- Trainer-Client management capability: Multiple trainers managing and monitoring an unlimited number of clients
- Easily customizable programming and reporting/exporting options

License E: Education

Applications: Kinesthetic learning, physical education, adaptive PE, special education, sports After-school programs at YMCAs, JCCs, Community Centers, Boys & Girls Clubs

Populations: Youth of all ages and abilities

Includes:

- Games Content
- Data Management: managing and monitoring unlimited number of students
- Easily customizable programming and reporting/exporting option
- Multi-site Monitoring: Deployment of programming across multiple sites monitors data of all students at all sites. Provides validation of success of all programs not only SMARTfit.
- Group Training: Automatic data tracking using QR wristbands

© Copyright SMARTfit Inc. 5-28-25

- Leaderboards and Challenges: designed to drive engagement and competitiveness with self and others, SMARTfit's leaderboards track the high scores in a set of brain-body activities that are applicable to each demographic group/gender.

License EA Annual License: Education and Community Center Assessments

Available Only with any SMARTfit Mini Model

Applications: After-school and other programs at YMCAs, JCCs, Community Centers, Boys & Girls Clubs

Populations: Youth, active aging, adaptive

Includes the following plus everything in the Education License

- SMARTfit Dual Task Cost, Physical Screening, and Cognitive Assessments License
- Eight Neuropsychological Tests combined with a motor activity including: Trail Making A & B, Digit Span Forward & Backwards, Corsi Block, Symbol Comparison A & B, Stroop A & B, Serial 7s
- Baseline and progress monitoring Dual Task Cost test measures and tracks transfer of all interventions to activities of daily living (ADL's) – developed by renowned experts Drs Mike Studer and Rob Winningham: Lower Extremity x 9; Balance x 12; Gait x 12. For Assisted level and independent level older adults

SMARTfit's API (for developers only) Sold Separately

- SMARTfit's Application Programming Interface enables its software components to communicate with 3rd party applications using a set of definitions and protocols. Call for pricing and details

What Post-Purchase Services Does SMARTfit offer?

1. Regular firmware and App updates are delivered via the internet, ensuring your system never goes out of date. License required.
2. SMARTfit Academy offers an estimated 7-hour self-paced training covering all aspects of use and application of the SMARTfit Mini in rehab mode. Inexperienced staff can quickly learn how to use and enjoy SMARTfit. https://smartfitinc.com/courses/smartfit-academy-level-1-setup/
3. Short Video training and support are offered through the HELP section of the SMARTfit App and on the http://www.SMARTfitinc.com website under the customer support tab. This allows for a quick review of features on an as-needed basis.
4. Zoom Training – customers can pre-purchase one to ten hours of training.
5. Option of on-site installation and in-person training In the rare circumstances where it is required, we offer on-site installation, set-up and training for organizations wishing to train a large number of staff.
